Letter of support to the Humanoids 2017 workshop proposal: “Towards Whole-Body Aerial Loco-Manipulation”

Milano, July 27, 2017

This is to express our support to the workshop “Towards Whole-Body Aerial Loco-Manipulation” proposed for the 2017 IEEE International Conference on Humanoid Robots (Humanoids) to be held on November 2017 in Birmingham, UK.

The proposed workshop aims to explore the combination of Whole-Body Control techniques and aerial manipulation. Whole-Body Control is at the basis of the topics covered in the workshop, and the proposed application domain is novel, and potentially very interesting.

As Co-Chair of the IEEE-RAS Technical Committee on Whole-Body Control, I strongly support the workshop proposal.

Kind Regards,

Dr. Eng. Federico L. Moro, PhD

Co-Chair, IEEE-RAS Technical Committee on Whole-Body Control

Researcher, National Research Council (CNR) of Italy
Institute of Industrial Technologies and Automation (ITIA)
Intelligent Robots and Autonomous Systems (IRAS)
